

WHERE DOES THE WATER GO?

Find where the water goes. BLUE pipes for stormwater. YELLOW for sewage wastewater. BROWN for septic tank wastewater. Colour in the pictures!

Stormwater flows into creeks, wetlands, rivers and the ocean. Wastewater flows to a sewage treatment plant or septic tank. Treated wastewater from the sewage treatment plant goes to the ocean. Untreated wastewater from septic tanks can leak into rivers and wetlands if not managed properly.

ALGAE BUSTER

Produced as part of the Phosphorus Awareness Project by the South East Regional Centre for Urban Landcare, 2013. For further information please phone 9458 5664.

This activity has been adapted from the Hornsby Shire Council 'SAM's Activity Kit'.
