

Mussel Watch is a program designed by Murdoch University researchers and community partners (SERCUL) to assist in the collection of distributional information for freshwater mussels. The website provides an educational tool to create awareness about the only freshwater mussel (*Westralunio carteri*) found in the south-west of WA.

We use the information you provide to create a database of mussel sites, which then are used to map the species distribution throughout south-western Australia.

Whenever you find *Westralunio carteri*, you can help by telling us about it.

Phone: (08) 9360 7419
Report a mussel sighting online at:
www.musselwatchwa.com
